

Leveraging Diversity and Stimulus to Drive Innovation

This session focuses on two key components used in the Innovation Engineering system: stimulus and diversity. Working with fellow attendees, this workshop will explore typical problems you may encounter and introduce tools to help you problem solve in a different, non-linear way. Attendees in this experiential workshop will experience how the use of stimulus, while leveraging the power of diversity, not only provides innovative results, but engages people in identifying solutions which assists with change management. All attendees will leave with a tool they can take back to their organizations and use the next day in a problem solving session.

Presenter: Rhonda Honke

As the Innovation and Growth Strategist at inVision Edge, Rhonda supports clients with gaining clarity on their strategic direction, establishing and running innovation systems, and providing senior leadership coaching. Prior to joining inVision, Rhonda held executive level positions in Human Resources, Information Technology, and Customer Service in the manufacturing and financial services industries. She holds a B. Comm (Hons), a B. Ed. and is a Certified Professional in Human Resources.
