L.T.A. Ngyuen (corresponding)

The mandate of the committee is to collect, research and document the heritage of the association, its members and the results and impact of the work of its members.

The committee has been very active over the past year.

A display was created for the new Association office, with four large panels covering the periods of up to 1920, 1921-1950, 1951-1980 and 1981 to the present. A fifth panel documents the history of the association. The panels have been augmented by a small display of artifacts, such as the Association gavel and an early association register and the key equipment of engineers and geoscientists- calculators, reference books and slide rules.

The committee has also put together some additional display material for use at the AGM and during Engineering & Geoscience Week.

We are very interested in continuing the documentation of our heritage. If you have photos, documents, artifacts, or information about our members, past and present, or the projects they worked on, we would like to hear from you.

Ultimately, we will be making the material we have produced available in electronic form with concise documents about the designs, projects and endeavours, from around the world, which have a connection to Manitoba and the Association membership. We will be digging into the who, why, when and where. We also intend to highlight the individuals involved.
