Position and Responsibilities

You will be responsible for providing mine engineering expertise and leadership to an underground uranium mine site. Core responsibilities include mine design, planning and scheduling, as well as project support. You will work with various software, such as Vulcan, have strong experience in mine design, planning and scheduling, and be familiar with mine ventilation, drilling and blast stoping, ground control, ground freeing, underground backfilling. You will also be responsible for activities required to support underground development, production and construction in a geo-technically challenging environment.

At Cameco we understand the value of a diverse workforce and we embrace, encourage and support workplace inclusion and diversity. New ideas, perspectives, experiences and expertise make Cameco stronger. Our vision is to create a culture where inclusion is the goal, and a diverse and representative workforce is our measure of success.

Education and Qualifications

Requirements of the position:

- Bachelor's degree in geological, geotechnical or mine engineering
- A minimum of 10 years of experience in underground mining or progressive mine engineering positions, or equivalent
- You must be eligible for registration with the Association of Professional Engineers and Geoscientists of Saskatchewan (APEGS)
- Work a rotational schedule and commute to site by aircraft
- Experience working with mine scheduling software and Vulcan

Assets:

- Lean methodology training

Preference will be given to Residents of Saskatchewan's North.

Safety is a top priority at Cameco. Successful candidates for all positions at safety-sensitive sites or in safety-sensitive positions must take and pass a substance test (which includes marijuana testing) as a condition of employment. Marijuana remains in a user's system for about 30 days, so applicants who recently used marijuana recreationally should not expect to pass a substance test.
