

Instructions to print templates:

- Set print scale to 100%
- Print on 11" x 17" paper
- Best practices: measure dimensions with a ruler after printing to insure proper scale.

Width Template

Instructions to use templates:

- Place bridge flat inside of the Length and Height Template.
 - o The ends of the bridge should fall inside of the white area on both sides of the template. If the ends of the bridge sit in the grey area, it is not long enough. If the ends of the bridge sit outside of the template, it is too long.
 - o The bridge height should fall inside of the template. If the bridge height sits outside of the template, it is too tall. There is no minimum height restriction, so the bridge cannot be too short.
 - o If the bridge sits anywhere outside of the template, it is either too long or too tall!
- Place the bridge sideways inside of the Width Template.
 - o The bridge width should fall inside of the template. If the bridge width sits outside of the template, it is too wide. There is no minimum width restriction, so the bridge cannot be too narrow.
- Best practices: these templates are helpful guides only. Always double check your dimensions with a ruler!

Length and Height Template
