Notes:

1. If doubt exists as to the interpretation of any question, the candidate is urged to submit with the answer paper, a clear statement of any assumptions made.

2. This is a Closed Book exam. Candidates may use one of two calculators, the Casio or Sharp approved models.

3. Any five questions constitute a complete paper. Only the first five questions as they appear in your answer book will be marked.

4. All questions are of equal value.

5. Write your answers in point-form whenever possible, but fully. Show all calculations.

National Examinations December 2010
98-Ind-A3 - Facilities Planning

1. (i) What factors are considered in developing facilities design alternatives?
   (ii) Explain your understanding of: (a) material flow planning hierarchy, (b) work
        simplification approach to material flow, and (c) principle of minimizing the cost of material
        flow.
   (iii) What are the resources of physical distribution systems for finished goods produced by a firm?

2. (i) Explain your understanding of: (a) material flow planning hierarchy, (b) work
        simplification approach to material flow and (c) principle of minimizing the cost of material
        flow.
   (ii) Explain the concept of activity relationship and space requirements used as a foundation for
        the facility plan.
   (iii) What are the advantages and disadvantages of product (line production) layout?

3. (i) A company works 8 hour days for 5 days per week. The production line of the company
        is operated 7 hours per day. Given the information in the table below, determine the
        theoretical minimum number of stations the line should be designed for an output of 130
        units per week. Show a schematic of the number of stations. What is the actual possible
        efficiency? Use the Ranked Positional Weight Technique in solving the assembly line
        problem.

   (ii) In progressive assembly, state the reasons for the increase in the line balancing delay.
   (iii) State the manner by which modifications to standard technique can be made to balance
          assembly/flow lines.

4. (i) (a) The average operator of a certain company performs at 100% (average pace) and the
        range of performance is from about 60% to 140%, and the distribution is assumed to be
        normal. Determine the station speed of the company's assembly line assuming that it is set
        for the operator whose pace is 85% of average (Z value for 85% or 15% = 1.04 or, -1.04).
        (b) Suppose the assembly line is decoupled and the line could be set for an average operator,
        what would be the gain in station speed?
   (ii) Explain the characteristics of the following two programs in the context of computerized
        layout of multiple items: (a) CRAFT and (b) CORELAP.
   (iii) State the basic requirements of computerized layout programs for multiple items.
5. (i) Explain the concept of manufacturing cell.
(ii) What are the benefits of integrating manufacturing cell with Just-in-Time (JIT), Total Quality Management (TQM) and Total Employee Involvement (TEI) concepts?
(iii) What is your understanding of: (a) logistics system and (b) flow patterns?

6. (i) Explain the concept of manufacturing cell.
(ii) What are the benefits of integrating the manufacturing cell concept with Just-in-Time (JIT), Total Quality Management (TQM) and Total Employee Involvement (TEI) concepts?
(iii) What is a material management system? Explain the resources of material management systems.

7. (i) Define the concept of materials handling in the context of facilities planning. State the objectives of materials handling.
(ii) Explain the concept of the material handling equation.
(iii) You have been entrusted to improve the facilities design (plant layout and materials handling) of a manufacturing plant.
(a) State the areas of the manufacturing plant that have the greatest opportunity for improvement. Explain briefly.
(b) Explain the systematic procedure you would follow to accomplish your objective.
(c) State the nature of the data or information you would require to solve the problem and the specific techniques you would employ.
